This file is designed to ease identifying and sorting the contents of albatross boluses on screen (monitor or projection).

This document is prepared with navigation links to aid in on-screen presentation.

This version can also be used if you want to use a plotter or poster printer. If you want to print for classroom use on 8.5" x 11" paper, use the PRINT version.

These high resolution images were created by National Geographic photographer David Liittschwager and donated for educational use only. The boluses from Tern Island and Kure Atoll were provided by U.S. Fish and Wildlife Service and the State of Hawaii Department of Land and Natural Resources. The contents were prepped by Hawaii Pacific University and Oikonos as part of a research study on plastic ingestion by Pacific albatrosses breeding in Hawaii. This program was created by NOAA's Cordell Bank National Marine Sanctuary, Papahānaumokuākea Marine National Monument, and Oikonos Ecosystem Knowledge.

Please contact us with questions or for further use of these images:
